

Converting chicken waste into fertilizer (summary)

Fertilizer production

First, mix dropping with decomposed cowdung and cow urind and make a pile in shade and add organic decomposer. Keep the pile moist and compost will be redy in 2 months while for slaughter remains, mix it with decomposed cow dung and sprinkle organic decomposer and move mix to the shade and cover with leaves and after 3 months, fertilizer will be ready.

Similarly, for rotten eggs, place them in lemon juice and raw sugar to make growth promoter and finally after 15 days, mix with lemon juice raw sugar solution.
