Herbal pest repellant

Repellant type one

For 10 litres, use 1kg of mixed insect repellant leaves, 1kg of bitter leaves and 1kg of aromatic leaves. These should be chopped so as to release odour faster. Additionally, add 10 litres of water and 1 litre cow urine to speed up the process, thereafter place the container in shed and cover. Furthermore, stir materials daily, filter solution after 1 week and store in air tight containers. If well stored the solution can stay for 2 months.

Repellant type two

Alternatively, grind 250 grams of ginger, 250 grams of garlic, 250 grams chilli and mix the paste well. Thereafter add 5 litres of water, boil, cool the mixture and add 1 litre of cow urine. Store the solution for 1 week, filter and store in air tight containers, if well stored the solution can last for 3 months. However before application grind and add 1 kg hibiscus leaves.
