How To Feed And Mulch Fruiting Plants, and Harvest Garlic

Crop management

Though a farmer should apply fertilizer over the leaves for flowering, she should mulch the garden and water after to prevent blowing away of the mulch and also cover garden using net to protect it from intruders and harvest garlic when leaves grow yellow and lay them on soil for drying for 3 days. After, hang garlic in bunches an leave for 6 weeks for full drying and finally chop off all roots and stalks and store them.
