

How to Grow Peas, Complete Growing Guide

Crop management

As peas grow well in cool weather and do best in spring, they should be planted 4-6 weeks before the last frost date and also planted in intervals for continuous harvesting. Mix organic matter with soil and directly seed peas or inoculate them with rhizobia bacteria and plant after.

Similarly, peas do best when directly seeded and types are bush and vining peas however vining peas should be planted 1.5 inches deep in the soil and planted along the fence. Grow peas 6-8 weeks before first expected frost and protect them against pests and keep soil with high moisture levels.

Mulch soil and harvest peas 60-70 days from planting by picking them to allow more production. Hold fruit by one hand and pull it by the other hand to harvest peas.
