

How to Identify and Scout for Fall Armyworm: Variant for South Sudan in English (USA)

Pest management

First, scout field in a W pattern for random scouting of field and when scouting, walk 5m into field and move to 5 locations and scout border rows and look at 10-20 plants closely for each location for the signs of armyworm damage.

Similarly, record number of plants at first location with damage of fall army worm and move to the next location and do the same and then to all locations as well. If 2 of 10 plants in each location are damaged, treat with faligen bio-pesticide.

After spraying, no one should enter the field until it dries and finally re-scout field after a week and repeat spraying every week for 3-5 weeks.
