

How To Plant Onions And Leeks

Crop management

First, wash the roots in solution, cut off some leaves and bottom roots after washing using scissors for proper growth. Similarly, make holes 20cm apart to plant leeks in trenches as onions grow big on mounds because of extra good drainage.

Deep onions in water and wash off soils, cut off some leaves and bottom roots of onions and using a stick, make holes 20cm apart on mounds and place onions in them. Furthermore, spray onions to prevent pests and diseases and add compost to the bed before planting to make soil friable and also at 6 weeks after planting.

Finally, water the crops after planting for the first 3 days and make the garden weed free.
