How To Produce Catfish Feeds and Pellet it Using Local Materials

Procedure

Start by boiling 5 litre of clean water, pour boiled water in 20 litre bucket, add cassava flour and stir. Thereafter, add equal measure quantities of blood meal, followed by soya bean meal, fish meal, methionine and stir well. Additionally, dissolve salt in water, add dissolved salt to the mixture and continue stirring.

Pelleting process

After preparation of the mixture pour it into the pelleting machine and change the pelleting machine disc to desired pellet size. Thereafter, turn the pelleting machine carefully to facilitate the added mixture turn into pellets.
