

Increasing layer chicken growth, egg production using pawpaw powder organic supplement.

Pawpaw powder benefits

First, pawpaw powder boosts the growth rate in layers and improves the feed conversion efficiency hence improving layer chicken productivity by increasing egg laying as well as maintaining the health of birds. Additionally, it also boosts egg production and egg weight. Furthermore, it also improves feed palatability hence increasing feed intake for maximum egg productivity as well as improving the weight of day-old chicks. Lastly, it boosts the immunity of birds as well as removes toxic compounds from the body.

Preparation steps

Start by cutting ripe pawpaw into two halves, remove seeds, dry, and grind them well into powder. Lastly, add 1% of pawpaw powder organic supplement to every kilogram of layer feeds. This effectively kills bad bacteria, worms, and parasites thus good digestion, absorption, and nutrient utilization.
