Make Your Own Weed Fertilizer

Fertilizer making

First, collect weeds like alfalfa, amaranth, bee balm, bird’s foot, chick weed, chicory, clover, comfrey, dandelion, garden cress, lambsquater and stinging nettle. Put weeds in bucket, add water to surface and cover with lid for fermentation and cover for 6 weeks and its ready for use.
Finally, mix 1 part of fertilizer with 3 parts of water and apply at all stages of plant.
