

Natural organic products to boost weight gain from 1kg to 3kg in 30days after deworming chicken

Effects of parasites

Usually affected chickens have poor feed digestibility, absorption and feed conversion. Furthermore birds show signs of stress and gapping, lethargy and low feed intake. Furthermore, affected birds lose weight, pass out bloody diarrhea and their digestive systems block.

Organic remedies

Start by adding 1 teaspoon of apple cedar vinegar to each gallon of chicken drinking water, this creates unfavorable conditions for the worms. Also add 2% of diatomaceous earth in chicken feeds, alternatively add pumpkin seeds powder in chicken feeds these kill all types of worms. Additionally, also add either garlic powder or extract in chicken feeds and water respectively. Lastly, give chicken plain yoghurt to facilitate growth of the gut micro flora.
