

Neem Tea Bag

Neem production

First, crush fruit gently using a motor and pestle to remove outer cover and spread it on the tarpaulin until they dry. Put the dried neem fruits in mortar and pound gently to remove seed without breaking it inside.

Similarly, use a piece of cotton of 20*10cm, fold it into half and sew sides together to make tea bag and weigh 250g of powder, put into tea bag and tighten the top and place in plastic bag. Store teabag in cool dry place and to prepare pesticide, remove tea bag from plastic bag and soak in 5 litres of water and after 24 hours, squeeze the tea bag to extract as much neem as possible for 10 minutes.

As each tea bag provides 5 litres of pesticide, pour liquid in pesticide sprayer and spray crops. Neem should not be used around ponds as it is harmful to fish and finally, only apply during late evening, night or early morning.
