

Starting a Business – How to Start a Business Dairy Farm and Dairy Cow Farm Management

Being a good investment, dairy farming quality and quantity of production depends on the level and type of technology used.

In dairy farming, milk and milk products have a huge demand throughout world and starting dairy production using family labour. Dairy farming can be a great income source and employment for the unemployed.

Dairy management

During management, provide cows which requires space inside house depending on breed which is usually 1 sq ft for open space and 40 sq ft space inside house per cow. Make proper ventilation system and ensure good aeration and light inside the house.

Similarly, provide good nutritious feed to cows for proper growth and good health. Feed them on forages, straws to fulfil energy demands and maximise milk production. Provide animals with enough water as dairy cows require 5 l of water to produce 1 l of milk.

Take care of good management of cows by giving them nutritious feed and sufficient clean fresh water. Vaccinate timely, keep house clean and wash cows regularly and select a can and a clean place for milking the animals using machines or hand milking methods..

Furthermore, set marketing strategies before setting up dairy farming business and always take good care of the animals. Visit other commercial farms in the area to identify new techniques and methods of raising cows.

Finally, consult the vet and employ experienced farm workers on the farm for large production.
