Supplementing baking soda to broilers to boost their weight, immunity and cure diarrhea

Baking soda benefits

First, baking soda prevents broilers from the negative effects of heat stress and treats diarrhea thus controlling the loss of important irons through watery droppings. Additionally, baking soda as well improves feed intake, weight gain in broilers and also boosts the digestion of feeds, absorption of nutrients by regulating PH conditions thus weight gain and improved growth rate. Lastly, baking soda also eliminates odor in chicken poop by killing molds and bacteria as well as boosting chicken body immunity by reducing stress hence more resistance against infections.

Additional benefits

Additionally, baking soda increases water consumption thereby boosting broiler weight gain and production. Furthermore, it also promotes protein digestibility and absorption thus weight gain, and better health. Lastly, baking soda treats sour crop by killing harmful bacteria and parasites in the gastral intestinal tract.
